Education

Bachelor of Engineering - Software Engineering

September 2020 - April 2025

Ontario Tech University, Oshawa, ON

Key Courses: AI, Data Structures & Algorithms, Computer Networks, Web Development, Distributed Systems, OOP, OS

Skills

Languages: JavaScript, Python, SQL, HTML, CSS, Java, C#, C++, Kotlin, PHP, DAX, VBA, Perl.

Technologies: Linux, Git, Docker, Kubernetes, MySQL, MongoDB, Node.js, React, Next.js, LangChain, Azure, Bootstrap, jQuery, Angular, Express.js, Firebase, Power BI, JUnit, Entity Framework, Blazor, Jira, Android Studio, Word, Excel, PowerPoint.

Professional Experience

Cyber Security Student

May 2024 – December 2024

Canadian Nuclear Laboratories – Fredericton, NB

- Developed a Full-Stack Maturity Model Application using **Blazor**, **JavaScript**, **HTML**, **CSS**, **C#**, **REST APIs**, **Entity Framework**, leveraging **Scrum** principles to enable critical infrastructure organizations to navigate OT cybersecurity and reduce document retrieval times by **40%**.
- Conducted research on the **Wi-Fi Pineapple**, an advanced ethical hacking tool, auditing **100+** Wi-Fi networks and creating a comprehensive library of simulated attacks to strengthen client cybersecurity training programs.
- Established and enforced cybersecurity policies and procedures in alignment with **NIST** and **CSA** frameworks to enhance organizational security posture and maturity.

Software Engineering Intern

May 2023 – May 2024

Ontario Power Generation - Bowmanville, ON | Pickering, ON

- Built and deployed an advanced Darlington Fuel Handling Simulator using **JavaScript**, **HTML**, **CSS**, and **Python**, successfully integrated into the Fuel Handling Classroom, enhancing training programs for over **50** nuclear operators and improving training effectiveness by **30%**.
- Designed and implemented BI dashboards using **Python**, **DAX**, **SQL**, **Power BI**, **Power Query** and **Power Automate**, leveraging **Agile Methodology** to streamline operations and enhance workflow efficiency by **23%**.
- Optimized and enhanced the Reference Page of the Simulator Internal Website using **HTML**, **CSS**, **Angular** and **Bootstrap UI**, reducing user navigation time by **15%** and improving UI accessibility.
- Orchestrated and executed a targeted campaign to showcase the Darlington Fuel Handling Simulator, resulting in the successful engagement of over **500** OPG Power Expo attendees.

Projects

Generative AI Prompt-Based Web Application - [GitHub](#)

- Built an AI-driven web app using **Next.js**, **Express.js**, and **LangChain**, with **MongoDB** for storage and **Firebase Authentication** to manage user accounts securely.
- Integrated **OpenAI GPT** for context-aware query responses, enabling professors to manage course materials and reducing student query resolution time by **38%**.

Bazaar Marketplace App - [GitHub](#)

- Created a mobile marketplace app using **React Native**, **Express.js**, and **MongoDB**, with **Firebase Authentication**, enabling secure profiles to buy and sell items, add photos via mobile camera, search listings, and view locations through Google Maps API, offering a modern, intuitive, and seamless user experience.

Wordle - [GitHub](#)

- Developed a word guessing game that allows the user to guess the generated word using **HTML**, **CSS**, **JavaScript**, **Node.js**, and **Express**, incorporating asynchronous **API** calls.

Content-Based Image Retrieval - [GitHub](#)

- Engineered a **Python-based** Barcode Generator algorithm using radon barcodes, achieving an **85%** success rate in retrieving matching images from a dataset, demonstrating advanced algorithmic design and implementation.
